Network topology

Easypki

- create CAs
 - create & sign certs
 - revoke
 - create crls
-
- can't create bundles

```
/root/pki
|
|-- rootCA
|
|-- acmeCA
|
|-- certs
|
|-- keys
|
|-- index.txt
```

OpenVPN

Server

symmetric key
Server's certificate & key

pushes Stockholm routes
acknowledges London routes

Client

symmetric key
Client's certificate & key

knows Stockholm's public IP

Wireless security

freeRadius
EAP-TLS

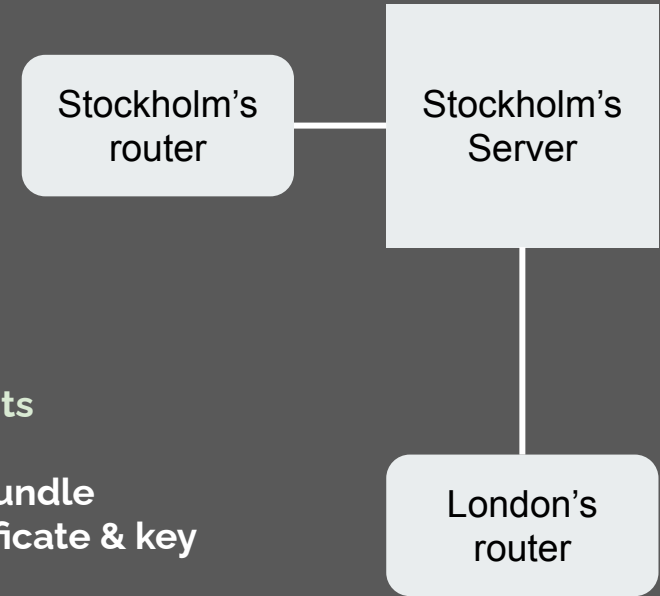

Server

CA bundle
certificate & key

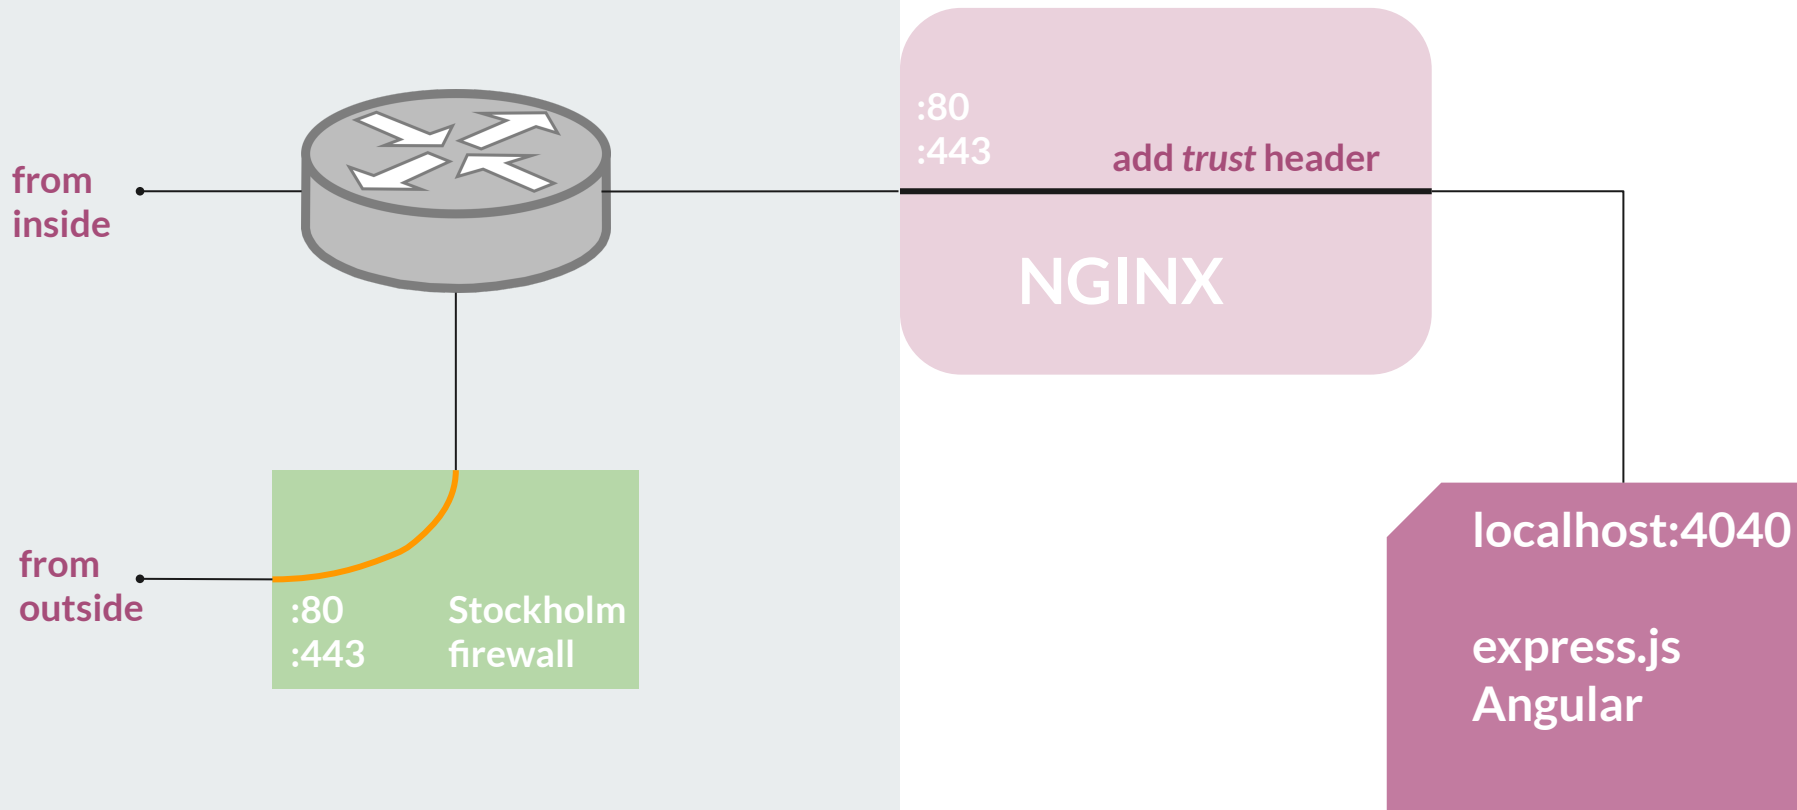

secret password shared with routers
must know routers' IPs

Clients

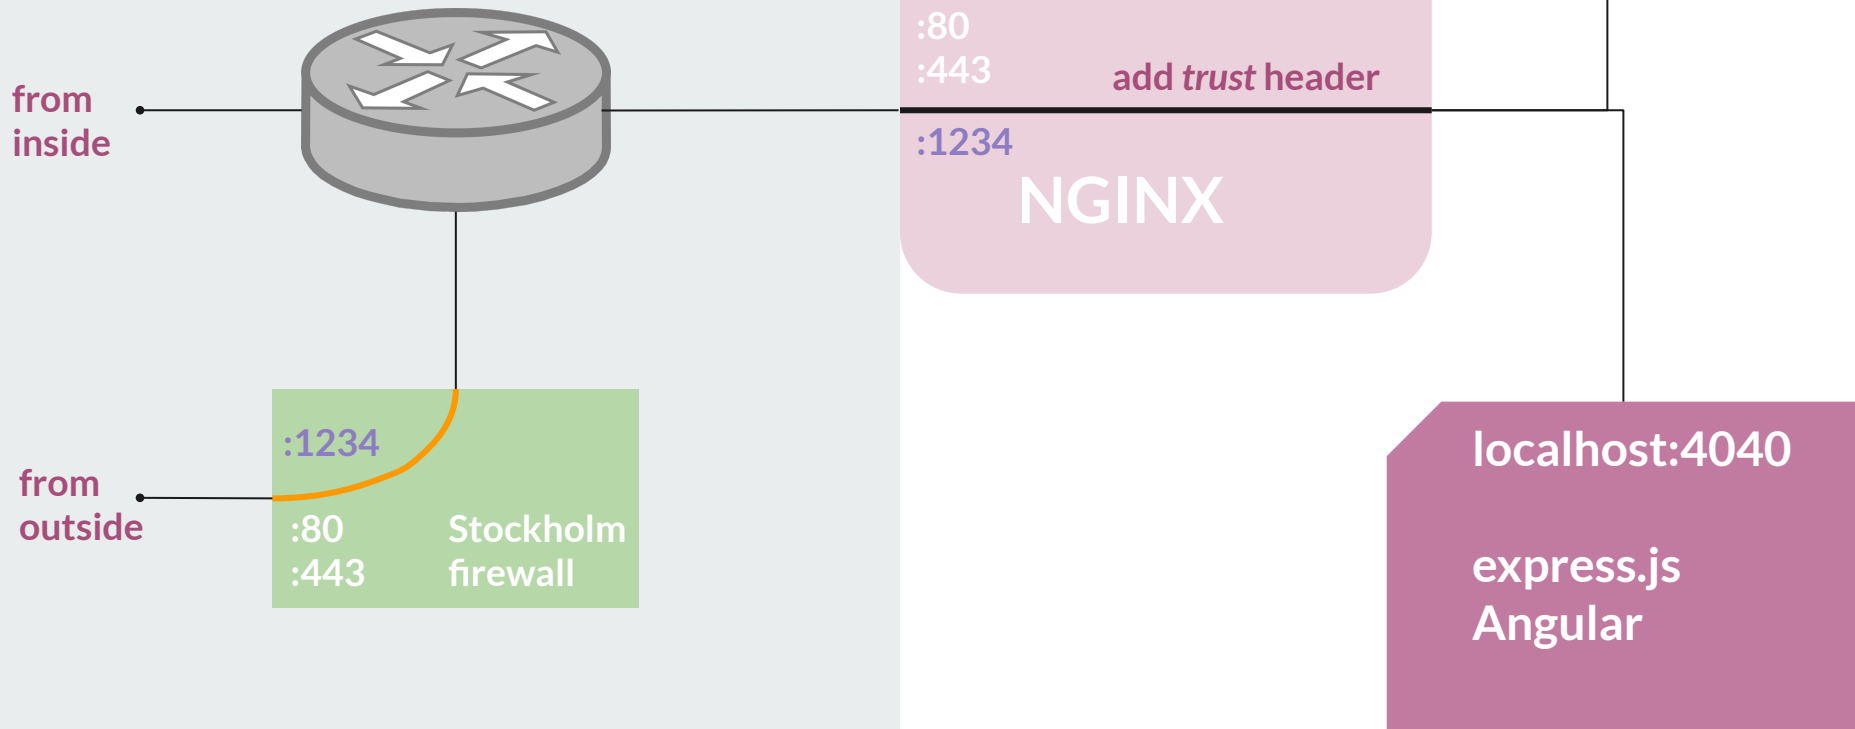

CA bundle
certificate & key

Web server

File transfer server

Firewall-ing. Interesting things

- allow UDP port 1194 for both firewalls
- allow tcp :80 :443 (web) :1234 (file transfer) :1812 :1813 (radius) on server machine
- allow input to localhost on the server (nginx reverse proxy)
- forward ports :80 :443 and :1234 from Stockholm firewall to the server
- nat masquerade packets from inside networks to the internet

Intrusion detection system

- snort
- logging incoming ICMP packets

Thank you
